

The S-LINE 47E and 52E 'Clam Shell' exposure units are the perfect combination of quality, ease of use and productivity. The 47E and 52E are designed to provide high quality plate after plate production with repeatable exposure and temperature control.

The high output lamps are temperature controlled to ensure the optimum output from each tube, there is a chilled bed with a high capacity chiller to ensure the plate stays cool for consistent and uniform exposure and a built in integrator for automatic exposure compensation.

The automatic, pneumatic lid and easy access to both side of the exposure bed ensure ease of use. The 24 channel PLC touch screen control means that dedicated exposure profiles are ready for a wide range of plates. To guard against lamp failure there is a fibre optic lamp failure indicator fitted to each lamp.

With a maximum plate size of 120 x 160cm (47 x 63") for the 47E and 132 x 203cm (52 x 80") for the 52E, configurable touch screen position (factory fitted) and convenient plate racks built in, the S-LINE 47E and 52E provides the answer to any solvent flexo plate room requirements.
